Project Overview:

Gulliver's Travel Agency Limited, the London office of the global travel business, Travelport is located near the City of London, and occupies modern purpose-built offices for several hundred staff.

Our client sought advice on the recommendations to enhance the existing fire alarm system in the most practical and cost-effective way within a busy occupied office building.

We proposed a reconfiguration of the existing wiring and further modifications to enable the installation of a new analogue addressable fire detection system with the majority of the works undertaken out-of-hours to accommodate the operation of their business.

To accommodate the increased volume of their main Comms Room, we carried out tests to determine the air-leakage of the existing room, and advised on the air-sealing required to achieve the minimum 10 minutes retention time. Despite access difficulties we helped our client meet these criteria, by air-sealing the compartment where practicable, increasing the FM200 system and providing certification of testing for compliance purposes.

Summary:

Project successfully completed over a period of weeks, the majority of works being out-of-hours.

Feedback:

"It is hard to achieve high standards every time but FDSA has never let me down."

Carol Leslie – Facilities Manager, GTA
